

## 1 Karl's graph

The angle  $\alpha$  is  $30^\circ$  in the example ( $\pi/6$  in radian). The sine of  $\alpha$  which is the height of the red line is

$$\sin \alpha = 1/2.$$

By the theorem of Pythagoras,...

 We can also nest loops to create interesting effects.

Labeling examples using TikZ.

You can also position labels on curves and, by adding the `sloped` option, have them rotated such that they match the line's slope.

Using `pics` to reuse a piece of code in a picture.
