The **angle** α is 30° in the example ($\pi/6$ in radian). The **sine of** α which is the height of the red line is

$$\sin \alpha = 1/2.$$

By the theorem of Pythagoras,...

Curved Path Construction.

? Scoping has another interesting effect: Any changes to the clipping area are local to the scope. Thus, if you say `\clip` somewhere inside a scope, the effect of the `\clip` command ends

after the end of that scope.  $x = 1, x = 2, x = 3,$

We can also nest

loops to create interesting effects.
