Figure 1: A basic gnuplot

1 Using gnuplot for LaTeX: A tutorial

Figure 1 is a basic plot, using with ‘set key’/‘unset key’ command to add/remove legends.

Figure 2 embellishes the plot.

Figure 3 has multiples curves on the same plot.

Figure 4 has the axis labeled in π and provides manual tic marks.

Figure 5 introduces an alternative form of figure 4, allowing us to specify the label and position of each tic individually.

A reference is in Figure 6

As a summary, see figure 7.

Figure 2: An embellished gnuplot

Figure 3: Another plot

Figure 4: An example of the `set xtics` command.

Figure 5: A refined version of figure 4

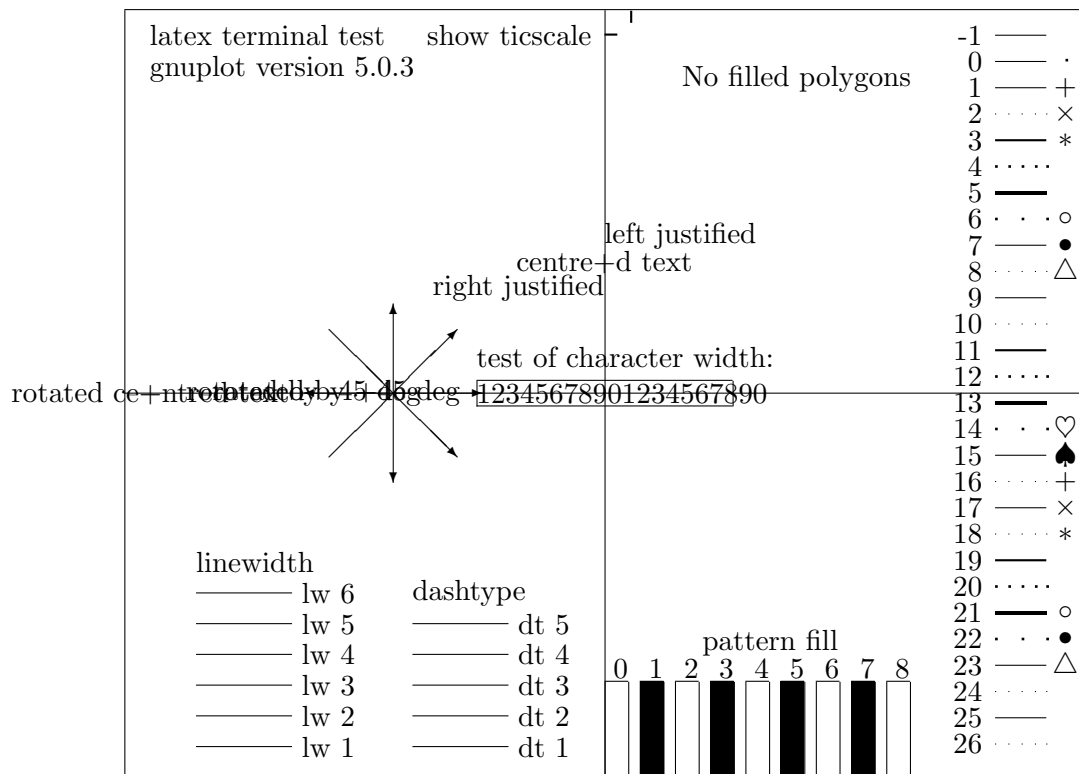

Figure 6: A reference figure

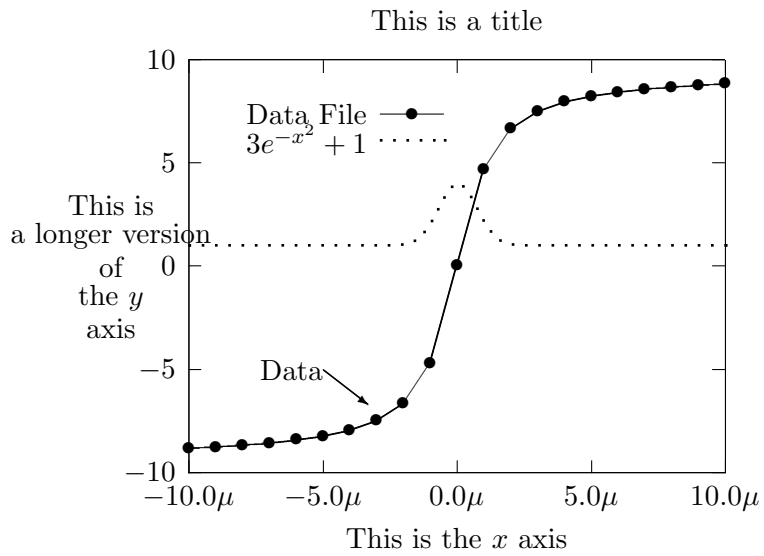

Figure 7: A summary
