

1 Karl's graph

The angle α is 30° in the example ($\pi/6$ in radian). The sine of α which is the height of the red line is

$$\sin \alpha = 1/2.$$

By the theorem of Pythagoras,...

2 Petri Nets

3 Book I, Proposition I

Proposition I

To construct an *equilateral triangle* on a given *finite straight line*.

Let AB be the given *finite straight line*. ...

4 Book I, Proposition II

Proposition II

To place a *straight line* equal to a given straight line ...

5 Diagrams as Simple Graphs

6 Johannes Lecture Map

Curved Path Construction.

? Scoping has another interesting effect: Any changes to the clipping area are local to the scope. Thus, if you say `\clip` somewhere inside a scope, the effect of the `\clip` command ends

after the end of that scope. \parallel  $x = 1, x = 2, x = 3,$

1,5	2,5	3,5	4,5	5,5
1,4	2,4	3,4	4,4	5,4
1,3	2,3	3,3	4,3	5,3
1,2	2,2	3,2	4,2	5,2

7,3	8,3	9,3	10,3	11,3	12,3
7,2	8,2	9,2	10,2	11,2	12,2
7,1	8,1	9,1	10,1	11,1	12,1

Labeling examples using TikZ.

You can also position labels on curves and, by adding the `sloped` option, have them rotated such that they match the line's slope.

Using `pics` to reuse a piece of code in a picture.
